Experience

Application Engineer · **Bell Canada** May 2025 — Present

- Maintained and enhanced internal web applications in a legacy environment, implementing new features, resolving issues, and improving system performance for infrastructure operations across Bell Canada.
- Led frontend development for a bulk tendering feature, extending an existing single-bid system to support multi-contractor bidding workflows.
- Reverse engineered legacy code to replicate and extend existing logic in the absence of formal documentation.
- Worked in a lean cross-functional team, collaborating with Product Owners, QA, and engineers to deliver features under shifting priorities and tight timelines.
- Leveraged AI-assisted tools to accelerate code understanding and navigation of legacy systems.

Software Engineer · **Bayad Center** Jul 2023 — May 2025

- Built and maintained the Bayad Web platform, implementing new features, resolving bugs, and optimizing performance across frontend and backend systems supporting bill payment services across Bayad Center branches nationwide in the Philippines.
- Implemented client-side caching strategies (session-based) for frequently accessed frontend data (e.g., biller lists), reducing redundant API calls and improving overall application performance.
- Implemented monitoring and logging solutions by integrating *New Relic* across frontend and backend, enabling real-time performance tracking, proactive issue detection, and improved system reliability.
- Drove Node.js runtime upgrade (v12 → v18) across microservices on AWS, resolving dependency conflicts and maintaining system stability during migration.
- Implemented structured logging for API request workflows (e.g., session handling, authorization, input validation, and business logic execution), providing clearer visibility in AWS CloudWatch and enabling the L2 support team to trace request flows, identify root causes,
- Collaborated with cross-functional teams, including Product Owners, Backend Engineers, and QA, in an Agile environment. Participated in Scrum meetings, backlog refinement, sprint planning, and task prioritization to keep development efforts aligned with business goals.

Frontend Developer · **Moneygment** Sept 2020— Feb 2023

- Initiated the revamp of our legacy system's frontend, improving performance, user experience, and efficiency by implementing modern technologies like ReactJS and Material UI.
- Transformed manual reporting workflows by developing Python-based scripts with cron jobs, ensuring the timely distribution of reports to key departments like Accounting and Marketing,

Database Administrator Oct 2019 — Sept 2020

- Designed and executed complex marketing data queries, analyzing customer transaction trends to generate insights for data-driven marketing strategies and business decision-making.
- Managed and maintained Unix-based servers, accessed remote servers, navigated the Linux environment, and retrieved logs for issue investigation and system monitoring, enhancing

Technology used

Frontend

React, Material UI, Ant Design,TailwindCSS, jQuery, Webpack, JavaScript

Backend

Python, Node.js (Microservices)

Database

MySQL, PostgreSQL

Infrastructure & Cloud

AWS (Lambda, CloudWatch, RDS, S3), Linux, Apache

Monitoring & Observability

New Relic, Cloudwatch

Version Control & CI/CD

Git, GitLab, Bitbucket (CI/CD)

Tools & Platforms

Docker, Vercel

Education

Bulacan State University

Bachelor of Science in Information Technology

Interest

Frontend

animejs, framer-motion, shadcn, tailwindcss, nextjs, typescript

Backend

fastapi, pydantic, docker, azure services & aws other services
